

Sanjit Kumar

4th year B.Tech, Computer Science & Engineering

KVIT RAIPUR

Phone : +91—9354232133

Email :sanjitkumar9011@gmail.com Address :

Suriyani, Phulparas

Madhubani(Bihar)847409

Education

2022 to now	Krishna's Vikash Institute of Technology, Raipur Bachelor of Technology, Computer Science & Engineering Currently Pursuing (4 th year 7 th sem)	
2021	12 th (Senior Secondary Examination) Mahatma Gandhi College, Darbhanga (BSEB)	64.8%
2019	10 th (Secondary Examination) S.K.Y. High School, Phulparas, Madhubani, Bihar (BSEB)	62.8%

Internships & Trainings

Jul—Aug'24	Python Programming Intern, CodTech IT Solutions, Hyderabad • Successfully completed a 1-month internship focused on core Python programming • Worked on real-world projects involving data handling and logical problem-solving • Gained hands-on experience in writing Python scripts and understanding backend logic • Demonstrated unwavering dedication and consistent performance throughout the program
Jun-Aug'25	Vocational Training in AI & Machine Learning, IIIT Naya Raipur • Successfully completed a vocational training program focused on Artificial Intelligence and Machine Learning • Gained knowledge in supervised/unsupervised learning, deep learning, and real-world AI applications • Worked extensively with Python libraries such as NumPy, Pandas, Scikit-learn, and TensorFlow • Completed hands-on projects including data classification, regression models, and neural network implementation

Academic Projects

Jan 2025 —July 2025	Notes AI Generator Flutter • Google Gemini AI • Firebase • Dart • Generative AI Integration: Integrated Google Gemini API to build an intelligent engine that generates structured educational notes and study materials from user prompts. • Multi-Modal Learning (TTS): Implemented Text-to-Speech (TTS) functionality using flutter_tts, allowing users to convert generated text into audio for accessible learning. • Smart Document Export: Developed an instant PDF & Printing system to convert AI-generated content into professional documents for offline study. • Cloud Data Synchronization: Utilized Firebase Firestore to organize notes by subject-wise categories with real-time syncing across user accounts. • Responsive Multi-Platform UI: Designed a fully adaptive dashboard using LayoutBuilder that provides a consistent user experience across Mobile, Tablet, and Desktop platforms.
Sep 2025- Dec2025	Safety Alert App Flutter • Node.js • Firebase • Geolocator API • Node.js Backend Integration: Developed a custom Node.js backend (hosted on Render) to handle secure SOS routing and trigger automated push notifications via Firebase Cloud Messaging (FCM).

Dec-2025-Now

- Shake-to-SOS Trigger: Implemented an accelerometer-based system that detects a phone shake to instantly launch emergency protocols without manual app interaction.
- Real-time GPS Tracking: Integrated Geolocator API to capture live coordinates and automatically share a precise Google Maps link with trusted contacts.
- Secure Peer Networking: Designed a unique "Safety Code" system allowing users to build a private emergency network for instant peer-to-peer alerts.
- Smart Background Alerts: Ensured 100% reliability by managing background processes, allowing the app to send critical data (Blood Group, SOS Type) even when the screen is locked.

ChetChat – Cross-Platform Messaging Ecosystem

Flutter | Firebase | Cloud Firestore | Dart

- Secure Authentication Architecture: Implement kiya ek dual-layered login system (Email & Google Auth) jo Firebase core se integrated hai, taaki users multiple platforms (Android aur Web) par securely access kar sakein.
- Unique Peer-to-Peer Networking: Ek custom "Safety Code" system design kiya (6-digit unique ID) jisse users bina personal contact details share kiye private networks aur groups build kar sakte hain.
- Real-time Messaging Engine: Cloud Firestore ka use karke real-time data synchronization implement kiya, jo personal chat aur group interactions ke liye instant message delivery ensure karta hai.
- Cross-Platform Synchronization: Firebase Options configuration ke zariye Android aur Web platforms ke liye unified database architecture taiyaar kiya, jisse real-time data consistency bani rehti hai.
- Scalable Group Infrastructure: Ek flexible hierarchy design ki jo "ChetChat" ko corporate (Company), academic (College), aur personal use-cases ke liye optimize karti hai.

Technical Skills

Languages & App Dev & Web Dev	Python, Kotlin, Flutter
AI/ML	HTML, CSS
	Machine Learning, Deep Learning

Achievements & Certifications

Jul 2025	Introduction to AI & ML, Infosys Springboard
Jun 2025	Mobile App Development using Flutter, Infosys Springboard
Jun 2025	Google Flutter — Advanced, Infosys Springboard
Jun 2025	Mastering Flutter - Infosys Springboard
